

JBI Systematic Review Title Registration Form

Title: The title of the proposed systematic review. Must not be in question form. : Choose quantitative, qualitative or comprehensive review.

Effectiveness of ACP (advanced care planning) on aged people in community dwelling: a systematic review protocol

Centre: Name of the JBI Centre

The Otemae University Implementation Centre : A JBI Affiliated Group (OUIIC)

Primary Reviewer

Name: Name of the Primary Reviewer

Email: Email address of the Primary Reviewer

Mariko Yamamoto

mariko-y@otemae.ac.jp

Question: The question to be addressed by the proposed systematic review. There must be clear indication of each of the PICO elements below.

What is the effectiveness of advanced care planning on aged people in community dwelling?

PICO

Population: Please enter a clear and precise description of the population of interest. Include information such as; age ranges, sex, etc. Applicable conditions / diagnostic criteria can be stipulated.

Community-dwelling aged people.

Intervention: Intervention (quantitative - effectiveness)

Advanced care planning (ACP) interventions targeting on community-dwelling aged people. ACP interventions are effective process for discussing and making a decision for their own future health care with family members or surrogates decision makers and health care providers in advance.

Please enter a clear and precise Intervention description

Comparator: Comparator (quantitative - effectiveness)

Please enter a clear and precise description

Qualitative reviews and quantitative reviews of association do not state a comparator.

Input comparators for comprehensive reviews.

Usual (Standard) care or non-ACP care

Outcome: Outcome & Context (comprehensive)

Primary outcomes will evaluate the rate of ACP implementation of aged people.

Secondary outcome include knowledge or attitude of ACP, quality of communication, decision-making confidence, ACD completion rate, decision-making experiences, aged people and their family's satisfaction with health care.

Please enter a clear and precise description or list of the outcomes of interest (quantitative reviews of effectiveness and association).

Outcomes must be measurable (please provide appropriate relevant measurements (e.g. quantities, tools, etc.) and clearly related to the stated Intervention or Exposure.

Outcomes can be marked as 'primary' (to be used in the search strategy) or 'secondary' (of interest but not used in the search).

Qualitative reviews do not state 'Outcomes' but should however detail the 'Context' (e.g. sociocultural, health service/ community setting etc). Comprehensive reviews should list both outcomes and context.
