Evidence Implementation Training Program

JBI, Faculty of Health & Medical Sciences

Are you a health professional committed to quality improvement? Do you want to improve your knowledge and skills around evidence implementation and initiate positive changes in clinical practice?

Evidence Implementation Training Program

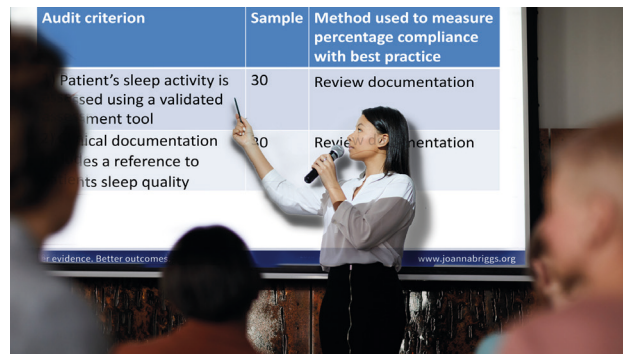

The JBI Evidence Implementation Training Program (EITP) is designed for busy clinicians, managers, policymakers and quality managers who are passionate about being a strategic contributor to organisational safety and quality by improving patient care, and who recognise the need to implement evidence into day-to-day clinical practice.

The JBI EITP is a six-month, evidence-based implementation program comprising two 5-day intensive training workshops and an evidence implementation project undertaken in the workplace over the intervening months.

During the program participants are provided with proven approaches to implementing evidence into practice and are equipped with knowledge, tools and resources to practically apply evidence in their own clinical settings by:

- Participating in group processes and discussions on developing clinical leadership skills and strengths to actively lead change
- Defining best practice in their practice area
- Conducting unbiased clinical audits and engaging in quality improvement processes
- Implementing frameworks and using software to get research into practice and to apply clinical evidence
- Designing and executing strategies to implement evidence-based practice in their own work environment.
- This program includes the one-day Clinical Leadership Workshop which will take place during the first of the two 5-day training workshops.

Program participants are supported by JBI Implementation Science Research Fellows as they develop, complete and report on their evidence implementation project.

MAKING AN IMPACT

See the resources below for some examples of how other past participants of the JBI Evidence Implementation Training Program around the world have made an impact in their clinical settings to improve health care and health outcomes:

Impact story: Pre-treatment assessment for breast cancer patients undergoing chemotherapy

Video: Improving quality of life for women with menorrhagia

Project report: Improving the capacity of healthcare professions to stem the spread of COVID-19 in Kenya

Published implementation project: Nutrition and hydration management among stroke patients in inpatient rehabilitation: a best practice implementation project
