**Title:** Influencing Factors of Partner Participation in Prenatal Care of Pregnant Women and Its Impact on Maternal-Infant Care: A Scoping Review.

**Centre:** The Brazilian Centre for Evidence-based Healthcare

### Primary Reviewer

**Name:** Cássia Cristina Araujo Vieira

**Email:** cassiacris05@gmail.com

**Question:** What are the factors that influence partner participation during prenatal care, and how does this participation impact maternal-infant care?

### PCC

**Population:** Partners of pregnant women

Articles that address partners or spouses of pregnant women who actively participate in prenatal appointments will be selected.

**Concept:** Factors influencing participation and the impact of this participation on maternal-infant cares

The identification and analysis of various factors that may encourage or discourage partner participation during the prenatal phase will be conducted. These factors may be socio-economic, cultural, educational, or emotional in nature. Additionally, we will examine how active participation of partners in prenatal care can affect the health and well-being of both the mother and the baby. This includes emotional support, physical assistance during pregnancy, and involvement in healthcare decisions.

**Context:** Prenatal period

This context involves the timeframe during a woman's pregnancy, from conception to birth. Throughout the prenatal period, various appointments and medical examinations are conducted to ensure the health of both the mother and the baby. It is within this context that the partner's involvement can have a significant impact.
