Question: What is the state of the art regarding environmental health literacy levels in the general population?

PCC

Population: general population

Concept:

Health Literacy

Degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions.

Context:

Environmental health

Environmental health is the field that studies and intervenes in environmental factors, which

can be physical, chemical, biological, and social. It can influence the health of populations. Its goal is to promote safe and healthy environmental conditions, preventing risks and contributing to collective well-being.
